## **Biographies**

**Raven Castro** is an Industrial and Systems Engineering student at the University of Southern California. He is doing the BS and MS degrees concurrently and expects to be graduated by May 2019. His main interests include data analytics applications in operations and startups. He has worked for Johnson & Johnson as a manufacturing engineer trainee and for a Y Combinator backed startup, Kalibr, as a Process Improvement engineer.

**Shengyu Huang** is a BS Industrial & Systems Engineering senior student at the University of Southern California. He is interested in data analytics applications in information technology and financial engineering. He has worked for USC Information Technology Services as data architect and for China CITIC Bank as a systems engineer. Upon graduation he will start the MS degree in ISE at USC and expects to be graduated by May 2019.

**Rafael Blay** is a BS Computer Science and Business Administration senior student at the University of Southern California. He is interested in data analytics applications in marketing and sports analytics. He has worked for Facebook as a data scientist, for BRASA as a Full Stack Developer, and, for Looqbox as a data analyst. Upon graduation he will start the MS degree in Analytics at USC and expects to be graduated by May 2019.

**Jolene Liu** is an Industrial & Systems Engineering MS student at the University of Southern California. She holds a BS degree in Industrial & Systems Engineering from USC. She is interested in data analytics applications in information technology and supply chain management. She has worked for Protiviti's Internal Audit and Financial Advisory practice, KPMG's KTech Advisory Solutions group, and Lightspeed Aviation's engineering department.

**Cesar Acosta-Mejia** is a faculty member of the Department of Industrial and Systems Engineering at USC. He holds a Ph.D. in Industrial Engineering from Texas A&M University, and a Ph.D. in Statistics from University of Texas at Dallas. His main interests include predictive and prescriptive analytics using financial data. Dr. Acosta is the instructor of the graduate programs in Financial Engineering and Analytics at USC. He has published in Communications in Statistics Theory and Methods, Communications in Statistics Simulation and Computation, Quality Engineering, and other top Industrial Engineering and Statistics journals.
