Biographies

Angga Pratama Herman is a researcher in the Faculty of Geosciences and Petroleum Engineering, Universiti Teknologi PETRONAS (UTP), Malaysia. He holds Bachelor and master degrees in Chemical Engineering from UTP specialized in advance material and reaction engineering. His research interest includes renewable energy via catalytic thermo-chemical conversion processes. He is currently one of the members of sand management research group in UTP managing the MTJA research project.

Noor Ilyana Ismail is a lecturer in the Faculty of Geosciences and Petroleum Engineering, Universiti Teknologi PETRONAS (UTP), Malaysia. She holds degrees in Petroleum Engineering from UTP and Robert Gordon University in Scotland. She specialized in oil and gas production operations and surveillance. Her research focuses on development of novel sand control technologies and holistic sand management guidelines covering surface and subsurface domains. She has been leading numerous research projects including onset sand production prediction, sand retention testing, sand erosion prediction, advance screen technology development and sand transport and deposition prediction in multiphase flow system. She is also currently an active member of Sand Area of Specialization in PETRONAS and a committee member of Energy Institute (UK) Malaysia Branch.

Muhammad Asnawi Vaea studied B. Eng. in Petroleum Engineering in Universiti Teknologi PETRONAS (UTP), Malaysia. He majored in Production Technology.

Muhammad Luqman Hasan is a lecturer at the Department of Petroleum Engineering, Universiti Teknologi PETRONAS (UTP). He graduated from UTP for his bachelor degree in Petroleum Engineering and from Heriot-Watt University, UK for his master degree also in Petroleum Engineering. He is currently teaching geosciences subject for Petroleum Engineering students, well logging and also field development plan for undergraduate students. In terms of research, he is involved mainly with drilling and production activities such as drilling fluids, flow assurance and also sand control. Not only that, he is also involved with research to enhance and improve teaching and learning implementation in UTP in which, he was also managed to win a few competitions nationally and internationally related to teaching and learning.
