#### BIOGRAPHY

**Rois Fatoni** is an Assistant Professor, and Department Chair of Chemical Engineering Program, Universitas Muhammadiyah Surakarta, INDONESIA. He earned S.T. in Chemical Engineering from Universitas Gadjah Mada, Yogyakarta, Indonesia, M.Sc. in Environmental Process Design from University of Manchester, UK, and Ph.D in Chemical Engineering from University of Waterloo, Canada. During his PhD studies he was supervised by Professors **Ali Elkamel** and **Leonardo Simon**. His research interests include modeling, simulation, optimization, scheduling, process safety, mixture design, advanced materials, biomass, and innovative technology for medium-small scale industries. He can be reached via email at: [rois.fatoni@ums.ac.id](mailto:rois.fatoni@ums.ac.id)

**Abdulhalim Abdulrazik** is currently a PhD candidate at University of Waterloo. He earned B.Eng in Chemical-Gas Engineering from Universiti Teknologi Malaysia, and Masters in Process Integration from Universiti Teknologi Petronas. Before joining Universiti Malaysia Pahang as a lecturer, he gained industrial experiences from oil and gas companies. His research interests include modelling and optimization of biomass and natural gas systems. He is a member of Board of Engineers Malaysia.

**Zhengkai Tu** is a 4th year chemical engineering student at the University of Waterloo with options in chemistry, statistics and management sciences. He also works as full-time and part-time research assistant at the university. Previously, he worked at various co-operative education positions in large corporations including Hatch Ltd, Rockwell Automation and NOVA Chemicals. He is actively looking for research opportunities to develop next generation computation software based on cloud technology and parallel algorithms, and to integrate chemical and material sciences into additive manufacturing.

**Ali Elkamel** is Professor of Chemical Engineering at the University of Waterloo. He holds a BSc in Chemical Engineering and BSc in Mathematics from Colorado School of Mines, MS in Chemical Engineering from the University of Colorado-Boulder, and PhD in Chemical Engineering from Purdue University (West Lafayette), Indiana. His specific research interests are in computer-aided modelling, optimization and simulation with applications to energy production planning, sustainable operations and product design. He has supervised over 70 graduate students (of which 30 are PhDs) in these fields and his graduate students all obtain good jobs in the chemical process industry and in academia. He has been funded for numerous research projects from government and industry. His research output includes over 190 journal articles, 90 proceedings, over 240 conference presentations, and 30 book chapters. He is also a co-author of four books; two recent books were published by Wiley and entitled Planning of Refinery and Petrochemical Operations and Environmentally Conscious Fossil Energy Production.
