future works, we plane to consolidate our work by applying it in the recycling of aircraft. Bombardier in Canada and Airbus in France has initiated similar projects. This would help also to identify other benefits and not yet recognized limits.

BIOGRAPHY

Khalifa Gaye is teacher-researcher, assistant professor at the University Assane Seck Ziguinchor, Senegal. He holds a PhD in science engineering, computer and mechanical mention, he is a founding member of the Computer Science and Engineering Laboratory for Innovation (LI3) and responsible for computer modeling team for the innovative design. He focuses especially on modeling for design, maintainability and recycling of manufactured and mechatronic products. He is a member of the scientific committee of CNRIA (National conference on research in computer science and applications).

Michael Gardoni is professor and director of the innovation management program at ETS (Québec - Canada) and acting director of the PhD school. He was professor at INSA de Strasbourg and INP Grenoble (France) and Co-Director of the "French-Chinese PLM Centre for Innovation" in Tsinghua University, Beijing, China. He is engineer in industrial engineering and has done his PhD in EADS (European Aeronautic Defence and Space Company). His research interests include methodologies of creativity-innovation and knowledge management.

Amadou Coulibaly is an Associate Professor at National Institute of Applied Sciences of Strasbourg (INSA) in the Engineering Design Laboratory. His research interests concern Rapid Innovative Products modeling, knowledge modeling for product behavioural performance engineering at early design stage using semantic CAD Systems. His current research industrial applications are focused on reliability and maintainability assessment for complex mechatronic products design. He is the Scientific Director of the Laboratory of Informatics and Engineering for Innovation (LI3) at Assane Seck University of Ziguinchor (Senegal).
