

Future work may use the methodology described in this paper to a large number of facilities and apply to real-world case studies. Also, expand the method in multi-constraint and multi-objective optimization problem.

BIOGRAPHY

Maricar M. Navarro is an Assistant Professor with the Department of Industrial Engineering at the Technological Institute of the Philippines. She earned her B.S. in Industrial Engineering from Technological Institute of the Philippines, Quezon City and Master of Engineering major in Industrial Engineering from Mapua Institute of Technology, Manila, Philippines. She has published journal and conference papers. She has done research projects that deals in optimization of production, warehouse operations, and service operations. Her research interests include manufacturing, simulation, optimization, facility layout and design. She is an active member of the Philippine Institute of Industrial Engineers (PIIE).

Bryan B. Navarro is an Assistant Professor with the Department of Electrical Engineering at the Technological Institute of the Philippines. He earned his B.S. in Electrical Engineering from Technological Institute of the Philippines, Quezon City and Master of Science in Electrical Engineering major in Power System from the University of the Philippines, Diliman, Quezon City.
