BIOGRAPHY

Suman Samanta is Doctoral student in the department of Industrial and Management Engineering, Indian Institute of Technology, Kanpur. He completed his masters of production engineering (with university medal) in the year 2010 from the department of Production Engineering, Jadavpur University, Kolkata. He completed his graduation B.Tech (Hons) in Production Engineering and Management in the year 2007 from the National Institute of Technology, Jamshedpur. His research interests include process simulation modeling, optimization, operations management etc. He is presently working in the areas of facility layout optimization, process simulation modeling and optimization, productivity improvement of various SMEs nearer to Kanpur, India.

Deepu Philip is currently an Associate Professor and teaches Production and Operations Management, Systems Simulation, and Automated Analytics. He has a bachelors in Industrial Engineering with his doctorate in Industrial & Management Engineering from MSU Bozeman. He has an outstanding combination of academic and industrial experience with leading organizations of the world. His research and teaching focus is on innovation solutions using cutting-edge digital technologies that employ the highest standards of application development. He has experience in designing and implementing complex systems in different fields including defense, aviation, transportation, banking, automation, health care, energy, communication, and decision making. In addition, he works on planning and scheduling, local search algorithms, systems simulation, decision support systems, distributed systems, and Fuzzy databases.

J.Ramkumar is currently a Professor and teaches manufacturing science, micro/Nano technology, and new product development. He has a bachelors in Production Engineering with his doctorate in Defect quantification in drilling of composites from IIT Madras, India with a best thesis award. Over the years his contribution in teaching and research is remarkable. He has worked for BOSCH group and improved the productivity of the company. His research and teaching focus is on Nano technology and inclusive design. He has several international and national patents in his credit and has published more than 100 journal papers.
