#### BIOGRAPHY

**Abraham Almaw Jigar** is a PhD candidate in the department of production and quality engineering at the NTNU. His main research topic is reliability assessment of safety-critical systems. He earned BSc. in statistics from the university of Gondar, Ethiopia, and masters in mathematics from NTNU. Abraham has worked as a reliability engineer at Aker Solutions, Norway, for one year before he started his PhD.

**Cecilia Haskins** is an Associate Professor in systems engineering at NTNU. Her educational background includes a BSc in Chemistry from Chestnut Hill College, and an MBA from Wharton, University of Pennsylvania. She has been recognized as a Certified Systems Engineering Professional since 2004. After earning her Phd from NTNU, she teaches and conducts research on innovative applications of systems engineering to socio-technical problems such as those encountered in sustainable manufacturing and global production systems.

**Mary Ann Lundteigen** is a professor in reliability assessment at NTNU with the main research focus on reliability assessment of safety-critical systems. She has a combined academic and industrial background, primarily related to the oil and gas industry. She has a MSc. in engineering cybernetics and a PhD in RAMS (reliability, availability, maintenance, and safety). Currently, she is heading the RAMS group at NTNU, and she is also the co-director of the new Norwegian Center of Excellence for subsea production and processing (SFI SUBPRO). Since 2006, she has also been a member of the technical committee for updating IEC 61511, a key standard that frames the design and operation of safety-instrumented systems for the process industry.
