

For years Pascal was one of the most widely used languages for programming instruction. It was available on nearly all computers, and, because of its familiarity, clarity, and security, it was used for production software as well as for education [6].

#### IV. CONCLUSION

Computational methods and models give us the courage to solve problems and design systems that no one would be capable of tackling alone [9]. Learning computer programming helps to use abstraction and decomposition when attacking a large complex task or designing a large complex system. It also helps to separate concerns and to choose an appropriate representation for a problem or modeling the relevant aspects of a problem to make it tractable. Thus, it helps to develop skills that are important for all professions. Hence, it shows the importance of learning programming.

#### BIOGRAPHY

**Carlos Oliveira** is an Associate Professor of computer programming in the Rio de Janeiro Federal Institute of Education Science and Technology, Rio de Janeiro, Brazil. He earned B.S. in Computer Science from Rio de Janeiro State University, Brazil and Masters in Computer Science from Fluminense Federal University, Brazil. He has published several conference papers in Brazil, US, Europe and Asia. In the last four years he was designated reviewer for 47 computing and engineering international conferences and journals, most of them in Europe and Asia. Prof. Oliveira has done research projects with Faperj and Cnpq, two Brazilian research funding agencies. His research interests include computer programming, educational games, operating systems and distance education. He is a member of the Brazilian Computing Society.
