BIOGRAPHY

Abdalla Alrashdan is an Assistant Professor in Industrial Engineering in the College of Engineering at Alfaisal University. He teaches courses in Ergonomics, Work Design, and Production management. He earned his B.S. in Civil Engineering from Jordan University, Jordan, Master in Engineering Management and PhD from Wichita State University, MS and PhD in Industrial Engineering from Wichita State University in Kansas USA. He has published journal and conference papers. His current research focuses on ergonomics product design and the development of thermal management to Li-Ion batteries using phase change materials. He works as a consultant and production manager at ALL Cell technologies in USA building Li-ion batteries used for electrical cars.

Ali Mohamed holds his PhD degree from University of Windsor, Canada. He has tremendous experience in industrial engineering applications in both academia and industry. He is familiar with all industrial engineering practices in the auto industry particularly with the big three and their suppliers. Dr. Mohamed has a teaching and research experience in Canadian universities/colleges as well as overseas. Dr Mohamed is currently passing over his learning experience to small and middle size industries in collaboration with international agencies and training companies.
