## **Abstract**

The Covid-19 pandemic has a profound impact on the order of human life around the world, many areas affected include: the fields of economy, health, education and tourism. The field of Education is impaired in the teaching process, where lecturers, teachers, and students turn system of learning from face-to-face into online setting. The facilities in the classroom need special attention to the layout of the seats and the natural air conditioning that passes through the windows and ventilation. This study discusses how the layout of classroom facilities during new normal in college can provide health and safety for lecturers and students when carrying out learning activities in accordance with the existing health protocol. It uses exploratory case studies with qualitative descriptive analysis approach to obtain data information about the impacts and consequences of the Covid-19 pandemic facing a new normal period. This research is expected to produce a solution for universities to be able to carry out teaching in this new normal, especially the problem of the layout of facilities related to social distancing, natural air conditioning, and ventilation.

## **Keywords**

New normal, Layout

## **Biographies**
