

Wiklund, U., Nordin, M., Wänstrand, O. And Larsson, M., 2000. Evaluation of A Flexible Physical Vapor Deposited Tic–C Coating System. *Surface and Coatings Technology*, **124**(2-3), Pp. 154-161.

Zergioti, I., Fotakis, C. And Haidemenopoulos, G., 1997. Growth of Tib2 And Tic Coatings Using Pulsed Laser Deposition. *Thin Solid Films*, **303**(1-2), Pp. 39-46.

## **Biographies**

**Abegunde Olayinka** is a PhD candidate in the Department of Mechanical Engineering Science at the University of Johannesburg, Johannesburg, South Africa. His PhD research work is on RF magnetron sputtering for growing thin films.

**Akinlabi Esther** is a Full Professor at the Department of Mechanical Engineering Science, University of Johannesburg, Johannesburg, South Africa. Her research interest is in additive manufacturing, laser technology, Joining process, thin film and renewable energy

**Philip Oladijo** is a Senior Lecturer in the Department of Chemical, Materials and Metallurgical Engineering at Botswana International University of Science and Technology, Palapye, Botswana. He holds a PhD from the University of Witwatersrand, South Africa and his research area is in Stress analysis, Material characterization, thin film and Coating processes.
