### **Abstract**

Humans keep using limited resources inefficiently without realizing that these resources will deplete to a small amount sometime in the future. With the ever-growing world, it is nearly impossible to rely solely on these resources for a long-term duration, the reason being why these resources should be changed for renewable ones. Another major reason to look for alternate resources is that non-renewable sources are environmentally unfriendly. Global warming and high levels of CO<sub>2</sub> in the atmosphere have forced us to think about alternative for these resources. The renewable resources' objectives dominate beneficially above from the minor contradictory ones that can be presented.

### **Keywords**

Renewable Energy, Resources, Alternate, Environmental

### **Biography**

Nora Pamela Rubalcaba is a college student pursuing her bachelor's degree in Science of Industrial and Systems Engineering at the University of Texas at El Paso, USA. She earned her high school diploma in the school "Instituto La Salle de Chihuahua" in Chihuahua, MX. Graduated within the top 7% of 2018 Class from the Physical-mathematician Area.
