Abstract

Research on green jobs continues to develop but is limited to one country and/or one field. From the perspective of bibliometric reviews, this study purposes to visually research mapping and research trends in the field of green jobs on an international scale. This study used bibliometric techniques with secondary data from Scopus. Analyze and visualize data using the VOSViewer program and the analyze search results function on Scopus. This study analyzed 459 scientific documents published from 1984 to 2020. The study reveals that Levine, L The Ohio State University Individual scientists and related organizations with the highest levels of green jobs. In green jobs, the Social Sciences and the New Solutions A Journal of Environmental and Occupational Health were the most researched and disseminated topics. There were nine community maps of joint researchers from around the world. Based on the identification of a collection of knowledge created from over thirty-six years of publication, this research proposes a grouping of green jobs research themes: Human, Environmental Sustainability, Sustainable Development, Employment, and Training, abbreviated as HESET research themes.

Keywords

bibliometric, green jobs, research themes, research trends, research mapping.

Acknowledgments

The writers are grateful to Universitas Airlangga for providing access to the Scopus database on scholarly publications and Bina Nusantara University for supporting the article processing charge.
