Abstract

Technology is something that is very influential in various fields of human life today, one of which is in the field of education. As is well known, the use of technology in the field of education today certainly has a very significant impact on the progress of education in Indonesia. However, in this pandemic era, face-to-face learning activities are becoming very limited so various online learning platforms must be involved as a solution. The higher the number of learning platforms used tends to be less effective and makes students or even teachers more confused. Therefore, an online learning application is designed that is equipped with various features to facilitate the online learning process and minimize the use of many different platforms so that the learning process becomes more effective.
