

## **Conclusion**

Our study tries to implement the importance and advantages of structural supply chain management in the RMG sector of Bangladesh. From the correlation part, it can be concluded that there lies a strong interconnection between supply chain management with the advancement of RMG industries. The study shows the significance of RMG industries by its export and employing female workers. While analyzing the data from the source BGMEA, we intended to manifest how the supply chain can influence the development of RMG industries.

The previous studies that have been done on this subject discussed the dependence on raw materials, responsiveness, lead time, and also the approach to supply chain management. Whereas, our study emphasizes finding the correlation between top supply chain management and the advancement of RMG industries and establish some hypotheses for further studies. We also try to compare the approach of average and top SCMs in the RMG sector. We come to have top SCM is very influential rather than the average SCM in this sector. We gathered our data from secondary sources which can be considered a limitation of our study and analysis.

The purpose of our study is to show the significance of supply chain management in the advancement of the RMG sector of Bangladesh. We analyzed, summarized, and correlated these two parameters. We also state some hypotheses regarding the issue that carries the positivity of this sector.

As this is an enormous sector to develop, there are always some potential topics to research in the future like implementing automation on SCM, Supply chain sourcing and logistics on RMG, Integrated Supply Chain on RMG, etc.
